

Test Scenarios

Test Cases for Login

- Verify successful login with valid credentials.
- Test login with an incorrect password.
- Check login with an incorrect username/email.
- Test login with a locked or suspended account.
- Verify the "Forgot Password" link functionality.
- Test login using social media account credentials.
- Check for case sensitivity in usernames and passwords.
- Verify the session timeout behavior.
- Test login with special characters in the password.
- Test login with a blank username and password fields.
- Ensure the "Remember Me" functionality works as expected.
- Test the "Logout" functionality.
- Check for security measures like CAPTCHA during login.
- Test login on multiple devices and browsers.
- Verify that login attempts are logged for security monitoring.
- Test login with two-factor authentication (if supported).
- Verify login with biometric authentication (e.g., fingerprint, face ID).
- Test login using a one-time password (OTP).
- Verify login with a security token or smart card (if supported).
- Test login using a hardware security key (e.g., YubiKey).

Test Cases For Registration

- Verify successful user registration with valid information.
- Test registration with missing required fields (e.g., email, password).
- Check for proper error messages when registration fails.
- Test registration with a pre-existing email or username.
- Verify password strength validation during registration.
- Test registration using special characters in the name and address fields.
- Check if registration data is stored securely.
- Test registration using different browsers.
- Verify that registration confirmation emails are sent.
- Test the redirection after successful registration

Test Cases For Bookings

- Verify successful booking creation with valid details.
- Test booking with missing required fields (e.g., date, time, user info).
- Check for proper error messages when booking fails.
- Test booking with an already reserved slot.
- Verify system prevents booking for past dates.
- Test booking outside of working hours.
- Verify booking with valid but edge-case inputs (long names, special characters).
- Test booking with invalid inputs (wrong email/phone format).
- Verify confirmation email/SMS is sent after booking.
- Test booking when the internet disconnects during the process.

Date & Time

- Verify booking can only be created for available time slots.
- Test booking overlapping with an existing booking.
- Verify recurring booking works correctly (if applicable).

- Test modifying booking date/time successfully.
- Verify booking cannot be modified once it is locked/started.

Payment

- Verify booking succeeds after successful payment.
- Test booking fails when payment is declined.
- Verify partial payments are handled correctly.
- Test booking with different payment methods (card, wallet, PayPal, etc.).

Cancellation

- Verify user can cancel booking before the scheduled time.
- Test cancellation after the booking start time (should fail).
- Verify refund is processed correctly after cancellation.
- Check if cancellation notification is sent to both user and provider.

User Roles

- Verify customer can only create bookings for themselves (unless proxy booking allowed).
- Test admin override: modify/cancel any booking.
- Verify multiple users cannot book the same slot simultaneously.

Search & View

- Verify user can view upcoming and past bookings.
- Test admin can search/filter bookings by user, date, status.
- Verify calendar view displays all bookings correctly.

Edge Cases & Performance

- Test booking with very long customer name.
- Verify booking with special characters in input fields.
- Test system behavior under high load (1000+ bookings).
- Verify booking when duplicate requests are submitted quickly.
